                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The human mitochondrial adenylate kinase (HMAK) protein of 227 amino cacids) can be administered therapeutically, especially by expressing encoding polypeptides, to treat neurological disorders e.g. Alzheimer's disease, Huntington's disease, epilepsy. It can be combined with a cultible carrier in pharmaceutical compositions, which can be administered to treat such disorders. HMAK was shown to have chemical candinistered to treat such disorders. HMAK was shown to have chemical and structural homology with adenylate kinase isozyme 3 (AK3) from cow, rat and human (92, 91 and 57 % identity respectively) and was expressed in e.g. cancerous tissues, brain and neural tissues and tissues involved in inflammation and the immune response. Increased activity or expression was proposed to be associated with cancer and immunological disorders, and decreased activity/expression with the development of neurological disorders. Products of the above invention may be used in the diagnosis and treatment of the above diseases and disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

                                                                                                                   멍
                                                                                                                                        õ
                                                                                                                                                                                                                                                                     This sequence represents a secreted human protein encoded by the nucleic cacid molecule designated Gene 58 from the human cDNA clone HHFHN61 (deposited as clone ATCC 97899 and ATCC 209045).

The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin Fc portion (e.g. AAV59502) for increasing the stability of the fused protein as compared to the human protein only.

The invention relates to 186 novel genes and their fragments (nucleic acid sequences: AAV59511-V59812; amino acid sequences AAW74731-W75026) which are useful for preventing, treating or ameliorating medical conditions can be diagnosed by determining the amount of the new polynucleotides. Specific uses are described for each of the 186 polynucleotides, based on which tissues they are most highly expressed in (see AAV59511-For described for which tissues they are most highly expressed in for described for each of the 186 polynucleotides, based on which tissues they are most highly expressed in
                                                                                                                                                                                         Query Match

                                                       The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system disease, such as alzheimer's, parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                              Tang

The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprises a 3'-end sequence complementary to a polynucleotide which comprises a 5'-end sequence comprises a 1'-end sequence, where the oligonucleotide which comprises a 1'-end sequence, where the oligonucleotide comprises a 1'-end sequence, where the oligonucleotide which comprises a steast 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from these Arfinesia.
                                                                                                                                                                                                                                                                                                                                 29-JUL-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13633 to AAH18742 represent human acid sequences; and AAH13632 to AAH13632 represent oligonucleotides, all of which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                         28-JUL-2000;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               07-FEB-2001

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes primer sets for synthesising 5602 (C full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the coligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence complementary to the complementary to a combination of complementary strand of a polynucleotide which comprises a 5'-end sequence, where the coligonucleotide which comprises a 3'-end sequence, where the coligonucleotide which comprises a 1'-end sequence, where the coligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and compared the sequence of the specification and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs assist without any specialised methods. AAH03166 to AAH13628 and C chab13633 to AAH13742 represent human cDNA sequences; AAB92446 to C of the present oligonucleotides, all of which are used in the exemplification cofficer of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

sequence and an oligonucleotide comprising a sequence complementary to a conjunct point of the sequence, where the oligonucleotide which comprises a 3'-end sequence, where the coligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893 represent human and and sequences; AAB92436 to AAH13632 represent oligonucleotides, all of which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                              The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-ord primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprises at sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs -

C-NT2RP2000329 has functions of converting extracellular signals into intracellular signals and changing cell morphology. The AK3-like protein, polynucleotides and antibodies are useful in the investigation of diseases such as MELAS (cerebral accident condition with hyperlacticacidenta), central nervous system disorder, epilepsy, skeletal muscle conditions, muscle disease, electron transfer disorders, Leber disease, diabetes mellitus, Peason disease, Parkinson's disease, metabolism disorders. They are useful for developing diagnostics and treatment agents. The present sequence represents the human AK3-like
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        27-AUG-1999;

Claim 20; Page 333; 1963pp; English

Sequences ABB10981-ABB12330 represent nucleic acids encoding them. The cinvention also relates to vectors and recombinant host cells comprising a conclectide of the invention, methods of producing the novel polypeptides, controlled against the polypeptides, methods of detecting the nucleotides or polypeptides in a sample, and methods of identifying compounds which conditions and polypeptides of the invention. Although novel, many of the polypeptides of the invention. Although novel, many of the polypeptides of the invention have homology to known proteins, thereby conditions activities, including cytokine, cell proliferation or cell differential therapeutic applications. The polypeptides of the invention may have various activities, including cytokine, cell proliferation or cell immunomodulatory activity; activine, thrombotic or thromboty conditions activities; receptor or ligand activities; or may be involved in oncogenesis, cancer cell proliferation or metastasis. Compending on their biological activities, homostatic, thrombotic or involved in oncogenesis, cancer cell proliferation or metastasis. Conditions, e.g., by protein or gene therapy. Such conditions in activities, polypeptides and nucleotides of the invention are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Such conditions include cancers, haematopoietic disorders (e.g., myeloid or lymphoid cell conditions, e.g., by protein or gene therapy. Such conditions include cancers, haematopoietic disorders (e.g., myeloid or lymphoid cell conditions, e.g., by protein or gene therapy. Such conditions and abnormal conditions cell and fungal infections in addition to immunomodulatory activities may be used to promote wound the provential scale and sell cultures to promote cell growth. For example, such polypeptides may be used to neuroepithelial cells manipulate stem cells in culture to give rise to neuroepithelial cells

The polypeptides and nucleotides may also be used in the diagnosis of the above conditions, and in drug screening techniques. The present sequence represents a novel human polypeptide of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activinyinhibin activity, chemotactic/chemokinetic activity, hemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; colon cancer; colorectal carcinoma

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAH32943 to AAH37195 and AAG73514 to AAG77788 represent human colon cancer-associated nucleic acid molecules (N) and proteins (P), where the proteins are collectively known as colon cancer antigens. The colon cancer antigens have cytostatic activity and can be used in gene therapy and vaccine production. N and P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate P expression. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of p by expressing in a patient's genome that affect the activity of p by expressing Additionally, N may be used to produce the colon cancer-associated Ps, by inserting the nucleic acids into a host cell and culturing the cell to express the proteins. N and P can be used in the prevention, diagnosis and treatment of colorectal carcinomas and cancers. AAH37196 to AAH37204 and AAB77789 represent sequences used in the exemplification of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes a new ribotide sequence of human that is, the CDNA sequence of human mitochondrial matrix GTP:AMP phosphotransferase (GTP:P) and the encoded polypeptide. The prese sequence represents human GTP:P.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WPI;

The present sequence represents the AK3 protein sequence which is used in comparison with human GTP3P in the present invention.
AAC97991 to AAC98763 encode the human colon cancer associated proteins, called human colon cancer antigens, given in AAB53234 to AAB54006. The human colon cancer antigens can have cytostatic, cardioactive, muscular
                                                                                                                                                                      Colon cancer associated gene sequences, antigens, useful for the treatment, predisorders such as colon cancer -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; colon cancer; colon cancer antigen; diagnosis; detection; identification; cytostatic; cardioactive; neuroprotective; vulne; immunomodulatory; muscular; gynaecological; gastrointestinal; nephrotropic; antiinfective; antibacterial; gene therapy; wound; neural disorder; immune system disorder; muscular disorder; reproductive disorder; gastrointestinal disorder; renal disorder

                                                                                                                                                                                                                                                                                                                                                     neuroprotective, immunomodulatory, gynaecological, gastrointestinal, vulnerary, nephrotropic, antiinfective and antibacterial activities, and can be used in gene therapy. The colon cancer antigen polynucleotides, proteins and antibodies to the proteins are useful for the prevention, treatment and diagnosis of colon disorders, such as colon cancer. The polynucleotides may be used in diagnostics and research, such as for chromosome identification, and as hybridisation probes. The proteins may also be used to prevent diseases such as neural disorders, immune system disorders, muscular disorders, reproductive disorders, sastrointestinal disorders, wounds, renal disorders, and cardiovascular disorders. AAC98764 to AAC98772 and AAB54007 represent sequences used in the exemplification of the present

                                                                  밁
                                                                                             δÃ
                                                                                                                                                                                                        denocarcinoma, leukaemia, sarcoma, immune disorder, Addison's disease, CC acquired immune deficiency syndrome (AIDS), anaemia, asthma, allergies, CC gout, microbial infections, cardiovascular disease and/or inflammation, CC myasthenia gravis, atherosclerosis, cirrhosis, osteoporosis, myocardial CC infarction, cataract, growth and development disorder, seizure disorder, CC pulmonary embolism, Gaucher's disease, lipid disorder, lipid storage CC disease, Pick's disease, Tay-Sachs disease, renal disease and obesity. CC PKIN may be used to treat disorders associated with decreased PKIN CC expression by rectifying mutations or deletions in a patient's genome CC that affect the activity of PKIN by expressing inactive proteins or to CC supplement the patients own production of PKIN. PKIN nucleic acids may be used to produce the PKIN production of PKIN. PKIN nucleic acids may be cused to produce the PKIN production of PKIN. PKIN nucleic acids into a host cell and culturing the cell to express the protein. PKIN nucleic acid and its complementary sequences may also be used as DNA probes in CC diagnostic assays to detect and quantitate the presence of similar cultication of restorative therapy. The present sequence is human PKIN-12 crossin.
                                                                                                                                       Matches
                                                                                                                                                                      Query Match
                                                                                                                                                                                                        Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   acids encoding them. PKIN is used as vaccine and in gene therapy. PK used in the prevention, diagnosis and treatment of diseases cancers,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Š
                                                                                                       CC polypertide (II) sequences. (I) is useful as hybridisation probes, CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC polynucleotides are also used in diagnostics as expressed sequence tags CC for identifying expressed genes. (I) is useful in gene therapy techniques CC (II). (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as a foot disorders involving (II). (II) and its binding partners are useful for treating CC imaging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. CC The polypeptide and polynucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations CC responsible for genetic disorders or other traits to assess biodiversity and oacid sequences. ABG00010-ABG30377 represent novel human CC diagnostic amino acid sequences of the invention of the portnered content of the portnered content of the portnered content of the fortune of the portnered content of the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              RESULT 15
                                                                  Note: The sequence data for this patent did not appear in the specification, but was obtained in electronic format directly
